October 1988 **ACM Transactions on Graphics (TOG)**, Volume 7 Issue 4

Full text available: [pdf \(1.02 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index term](#)

A proposal for a scalable frame store architecture for a hardware-based window graphics system is based on a distributed linear array of common elements called microframe stores. Each window independently configured in size and color depth. Unlike the strip-based hardware window system places no restrictions on the number of transitions that can be accommodated on each scanline. T real-ti ...

5 FlowMate: scalable on-line flow clustering

Ossama Younis, Sonia Fahmy

April 2005 **IEEE/ACM Transactions on Networking (TON)**, Volume 13 Issue 2

Full text available:  [pdf\(752.94 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index term](#)

We design and implement an efficient on-line approach, FlowMate, for clustering flows (connections) on a server, according to shared bottlenecks. Clusters can be periodically input to load balancing, congestion aggregation, admission control, or pricing modules. FlowMate uses in-band (passive) end-to-end shared bottlenecks. Delay information is piggybacked on feedback from the receivers, or, if imposed, round-trip time ...

7 Texture mapping 3D models of real-world scenes

Frederick M. Weinhaus, Venkat Devarajan

December 1997 **ACM Computing Surveys (CSUR)**, Volume 29 Issue 4

Full text available:  [pdf\(1.98 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index term](#)

Texture mapping has become a popular tool in the computer graphics industry in the last few years. It achieves a high degree of realism in computer-generated imagery with very little effort. Over the last few years, techniques have advanced to the point where it is possible to generate real-time perspective simulations. This paper describes texture mapping every object surface with texture from photographic images of these real-world scenes.

Keywords: anti-aliasing, height field, homogeneous coordinates, image perspective transformation, multiresolution data, perspective projection, polygons, ray tracing, real-time scene generation, remapping, visual simulators, voxels

8 The X window system

Robert W. Scheifler, Jim Gettys

April 1986 **ACM Transactions on Graphics (TOG)**, Volume 5 Issue 2

Full text available:  [pdf\(2.76 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

An overview of the X Window System is presented, focusing on the system substrate and the low-level applications and to manage the desktop. The system provides high-performance, high-level, A hierarchy of resizable, overlapping windows allows a wide variety of application and user interface. Network-transparent access to the display provides an important degree of functional separation,

9 Congestion: Best-path vs. multi-path overlay routing

David G. Andersen, Alex C. Snoeren, Hari Balakrishnan

October 2003 **Proceedings of the 3rd ACM SIGCOMM conference on Internet measurement**

Full text available:  [pdf\(142.64 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Time-varying congestion on Internet paths and failures due to software, hardware, and configuration delivery on the Internet. Many approaches to avoiding these problems use multiple paths between Internet hosts. These approaches rely on a path-independence assumption in order to work well; i.e., they work best when the path is independent of the congestion state.

paths between two locations are uncorrelated in time. This paper examines the extent to which this is true. In ...

- 10 Credit-based flow control for ATM networks: credit update protocol, adaptive credit allocation
H. T. Kung, Trevor Blackwell, Alan Chapman
October 1994 **ACM SIGCOMM Computer Communication Review , Proceedings of the conference on architectures, protocols and applications**, Volume 24 Issue 4

Full text available:  [pdf\(1.38 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [in:](#)

This paper presents three new results concerning credit-based flow control for ATM networks: (1) a credit update protocol (CUP) suited for relatively inexpensive hardware/software implementation; (2) a buffer allocation for virtual circuits (VCs) sharing the same buffer pool; (3) use of credit-based flow control to improve effectiveness of statistical multiplexing in minimizing switch memory. These results have been successfully implemented in a prototype switch.

- 11 High-performance polygon rendering
Kurt Akeley, Tom Jermoluk
June 1988 **ACM SIGGRAPH Computer Graphics , Proceedings of the 15th annual conference on computer graphics and interactive techniques**, Volume 22 Issue 4

Full text available:  [pdf\(1.73 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [in:](#)

This paper describes a system architecture for realtime display of shaded polygons. Performance of 10 million polygons per second is achieved. Vectors and points draw at the rate of 400,000 per second. High quality color, blending, realtime video input, and antialiased lines are supported. The architecture heavily leverages hardware forms: pipeline, vector, and array processing. It is unique in providing efficient and balanced graphics systems.

Keywords: graphics systems

- 12 Fast detection of communication patterns in distributed executions
Thomas Kunz, Michiel F. H. Seuren
November 1997 **Proceedings of the 1997 conference of the Centre for Advanced Studies on Communication**

Full text available:  [pdf\(4.21 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index term](#)

Understanding distributed applications is a tedious and difficult task. Visualizations based on process execution are used to obtain a better understanding of the execution of the application. The visualization tool was developed at the University of Waterloo. However, these diagrams are often very complex and do not provide a desired overview of the application. In our experience, such tools display repeated occurrences of communication patterns.

- 13 Link and channel measurement: A simple mechanism for capturing and replaying wireless channel
Glenn Judd, Peter Steenkiste
August 2005 **Proceeding of the 2005 ACM SIGCOMM workshop on Experimental approaches to network design and analysis E-WIND '05**

Full text available:  [pdf\(6.06 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index term](#)

Physical layer wireless network emulation has the potential to be a powerful experimental tool. An alternative to physical emulation, and traditional simulation, is to accurately model the wireless channel. In this paper, we explore the possibility of using on-card signal strength measurements to capture wireless channel traces. A key advantage is the simplicity and ubiquity with which these measurements can be obtained since virtually all wireless devices require such measurements.

Keywords: channel capture, emulation, wireless

- 19 The feasibility of supporting large-scale live streaming applications with dynamic application
Kunwadee Sripanidkulchai, Aditya Ganjam, Bruce Maggs, Hui Zhang
August 2004 **ACM SIGCOMM Computer Communication Review , Proceedings of the 2004 conference on technologies, architectures, and protocols for computer communications SIGCOMM**

Full text available:  pdf(461.96 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [info](#)

While application end-point architectures have proven to be viable solutions for large-scale distributed computing and file-sharing, there is little known about its feasibility for more bandwidth-intensive applications such as live streaming. Heterogeneity in bandwidth resources and dynamic group membership, in application end-points, may adversely affect the construction of a usable and efficient overlay. At the end, it may become ...

- 20 Large meshes and GPU programming: Geometry clipmaps: terrain rendering using nested rectangles
Frank Losasso, Hugues Hoppe
August 2004 **ACM Transactions on Graphics (TOG)**, Volume 23 Issue 3

Full text available:  pdf(964.46 KB)  mov(24:47 MIN)

Additional Information: [full citation](#), [abstract](#), [references](#)

Rendering throughput has reached a level that enables a novel approach to level-of-detail (LOD) control. We introduce the geometry clipmap, which caches the terrain in a set of nested regular grids centered on the viewpoint. These grids are stored as vertex buffers in fast video memory, and are incrementally refilled as the viewpoint moves. This provides visual continuity, uniform frame rate, complexity throttling, and graceful degradation. More ...

Keywords: level-of-detail control, terrain compression and synthesis
